

# CMPM202 PROJECT TWO

Training Neural Network for Creative Tasks

Presented by Alex Mayben  
and Jeffrey Weekley

# PROJECT 2 IN 2 PARTS

- Generate Text: Walt Whitman
- Generate Media: CycleGAN for Puffins and Mallards

# GENERATE TEXT

- Using the GPT-2 model on Google Colab
- Learning rate: 1000 epochs, temperature 0.7
- Walt Whitman was chosen because:
  - Large corpus of public-domain works
  - Easily gleaned from [gutenberg.org](http://gutenberg.org)
  - In Leaves of Grass alone, there are 129,066 words

# ORIGINAL SAMPLE

## **Facing West from California's Shores**

*Facing west from California's shores,  
Inquiring, tireless, seeking what is yet unfound,  
I, a child, very old, over waves, towards the house of maternity,  
the land of migrations, look afar,  
Look off the shores of my Western sea, the circle almost circled;  
For starting westward from Hindustan, from the vales of Kashmere,  
From Asia, from the north, from the God, the sage, and the hero,  
From the south, from the flowery peninsulas and the spice islands,  
Long having wander'd since, round the earth having wander'd,  
Now I face home again, very pleas'd and joyous,  
(But where is what I started for so long ago?  
And why is it yet unfound?)*

*From Whitman's Leaves of Grass*

# GENERATED SAMPLE

## **What is wrong**

*What is wrong with me? it is you, the earth,  
It is I, it is every one, it is you yourself—  
The minute you do not answer me the  
    mysterious glimmering illuminates,  
The moment you do not see the gleam I give you,  
The moment you are not yourself as I am, then I am.*

*NOT From Whitman's Leaves of Grass*

# GENERATED SAMPLE

## Whitman is

*Whitman is the poet of sin, and  
the poet of death;*

*What poet is there who does not write his country's poet?  
Who but leaves his state's poet behind him that writes in his  
state?*

*The name of the poet is hideous to me, it is rank to me,  
Offhand to you it comes some day or at night,  
Ollé warm you tapestry of my life, I know not why,  
But with you it comes every day, you fascinate me.*

*Why should I not be fascinated by the name of the poet?  
The name is terrible to me, (it is in the Latent Fecund  
on my soul,)  
I do not want the effusion of the name that drips from me,  
I want the effusion of the name that comes from me daily and  
forever.*

# GENERATED SAMPLE

## How is it

*How is it I extract strength from the beef I eat?*

*Is it the same beef my wife eats?*

*The same grass I eat? the same vegetables?*

*Is it the same hog-shoot I eat? the same mutton I eat?*

*The hay-cake I eat? the bread I eat?*

*The flax-husks I eat? the seeds I eat?*

*The beans I eat? the oil I eat?*

*The nitrogenous compounds I eat? the alkaline hydrolysis of  
the roots of trees?*

# GENERATED SAMPLE

## **Whitman is**

*Whitman is the poet of sin, and  
the poet of death;*

*What poet is there who does not write his country's poet?*

*Who but leaves his state's poet behind him that writes in his  
state?*

*The name of the poet is hideous to me, it is rank to me,  
Offhand to you it comes some day or at night,  
Ollé warm you tapestry of my life, I know not why,  
But with you it comes every day, you fascinate me.*

*Why should I not be fascinated by the name of the poet?  
The name is terrible to me, (it is in the Latent Fecund  
on my soul,)*

*I do not want the effusion of the name that drips from me,  
I want the effusion of the name that comes from me daily and  
forever.*

# MYSTERY SAMPLE

## **Turn the page**

*The song is over, the day is done,  
I announce the close of the book—the true ending,  
The great themes, the triumphs of the human race,  
The many great characters—the varied, vast, separate races,  
The unique, stern, remorseless, fire-breathing character,  
This serene, burning soul of mine.*

# GENERATING IMAGES OF BIRDS

Pix2Pix, a CycleGAN  
for Birds

# GAN Training against 400 Punk Album Covers

Input

Kernel

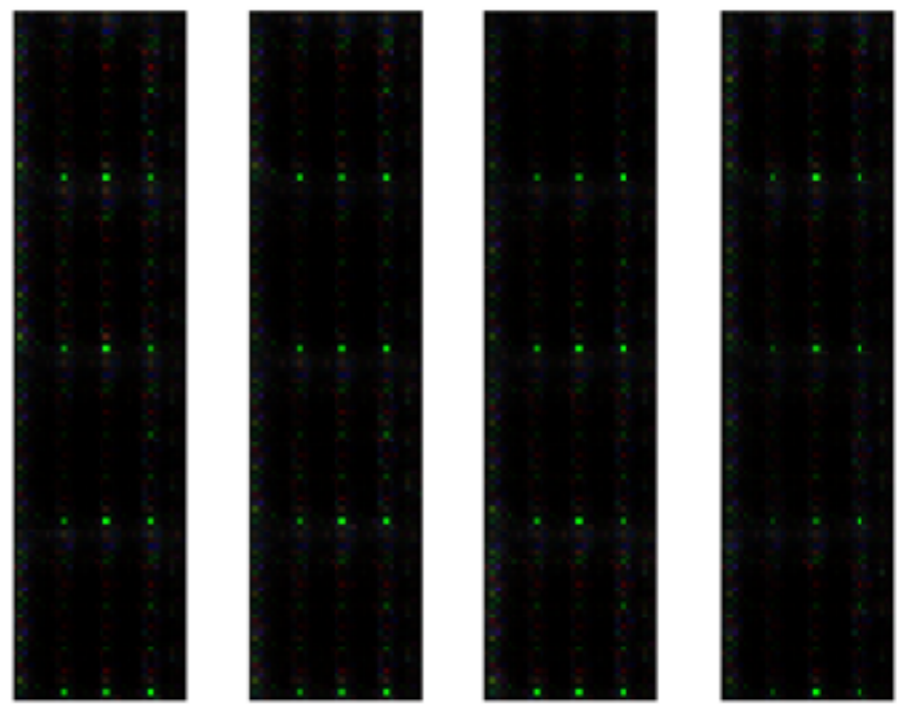

Whooping Crane

29

USA

# GENERATE IMAGES

- Using the Pix2Pix on Google Colab
- CUB-200-2011 Dataset from CalTech
  - Large corpus of tagged bird images
  - 200 species, each with 60 images

# PREPROCESSING

- Scaled to  $512 \times 512$ , then cropped each image to be exactly  $256 \times 256$  (Presuming the area of interest was centered and this would preserve features)
- Images need to be side-by-side in two folders (A and B) with same names and flip-flopped relative to each other.

Input Image

Validation

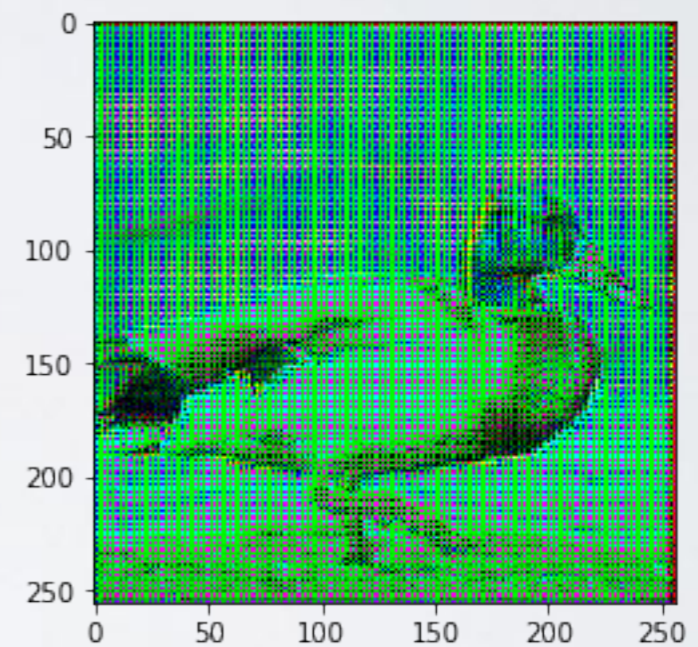

Test

# BUILD THE GENERATOR

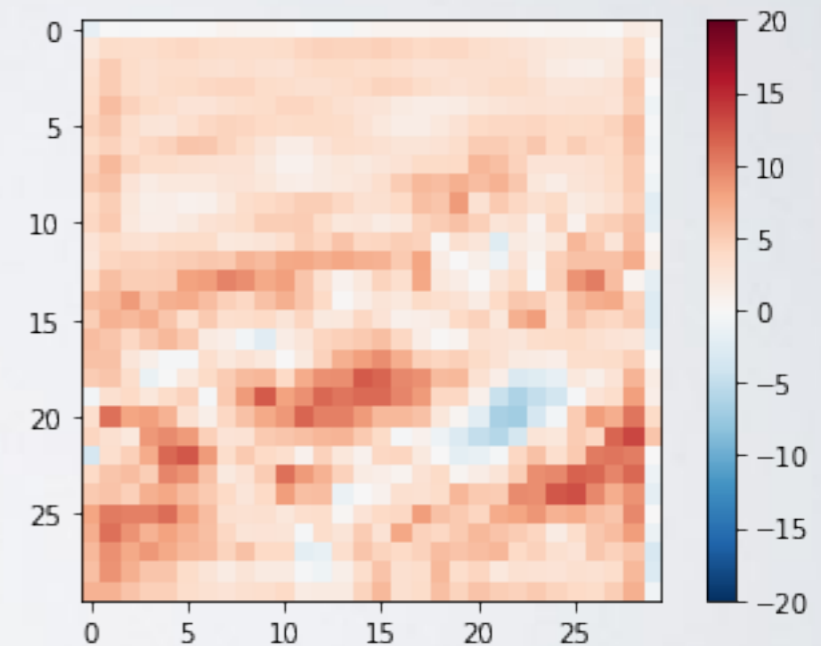

- The architecture of generator is a modified U-Net.
- Each block in the encoder is (Conv -> Batchnorm -> Leaky ReLU)
- Each block in the decoder is (Transposed Conv -> Batchnorm -> Dropout(applied to the first 3 blocks) -> ReLU)
- There are skip connections between the encoder and decoder (as in U-Net).

Generator Loss Sample

# BUILD THE DISCRIMINATOR

- The Discriminator is a PatchGAN.
- Each block in the discriminator is (Conv -> BatchNorm -> Leaky ReLU)
- The shape of the output after the last layer is (batch\_size, 30, 30, 1)
- Each 30x30 patch of the output classifies a 70x70 portion of the input image (such an architecture is called a PatchGAN).
- Discriminator receives 2 inputs.
- Input image and the target image, which it should classify as real.
- Input image and the generated image (output of generator), which it should classify as fake.

Discriminator Loss Function

# TRAIN THE MODEL

- 150 epochs
- Lambda 100 (don't know why this was chosen)

Input Image

Ground Truth

Predicted Image

# Tensorboard Sample Plots (only 5 epochs)

# POSSIBLE WAYS TO IMPROVE THE RESULTS

- Add More Data (Puffins!)
- Clamp color channels to easily discriminated color samples (posterize the images)
- Align the geometry between the samples

Whitman GPT-2 Code and Data available [here](#)

Pix2Puffins Code available [here](#)

# THANKS...

- To Manu for walking us through the failures of DCGAN
- Henry for reminding me that I needed to mount my drive
- Grad Student strikers for giving us the long weekend
